# App Idea

This app will allow users to join group activities (i.e. football) or join ongoing events. Targeting mostly active persons, this small social network will allow users to find new friends/persons with the same interests and therefore allow these people to become more active.

# Need

# Use Cases

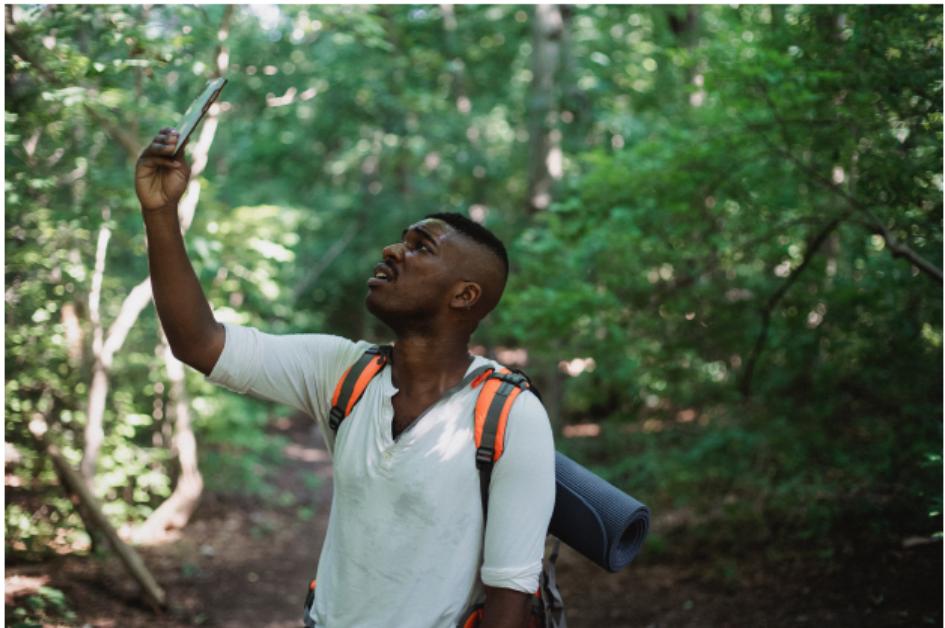

# Challenges and need for Adaptation

- build/find an efficient way to find locations
- assign each sport a set of requirements (e.g. important features the location needs)
- build a database for users and events

# Challenges and need for Adaptation

- build an organizer
- implement interaction possibilities
- find a way to offer event information offline (connectivity challenge)

# Approach

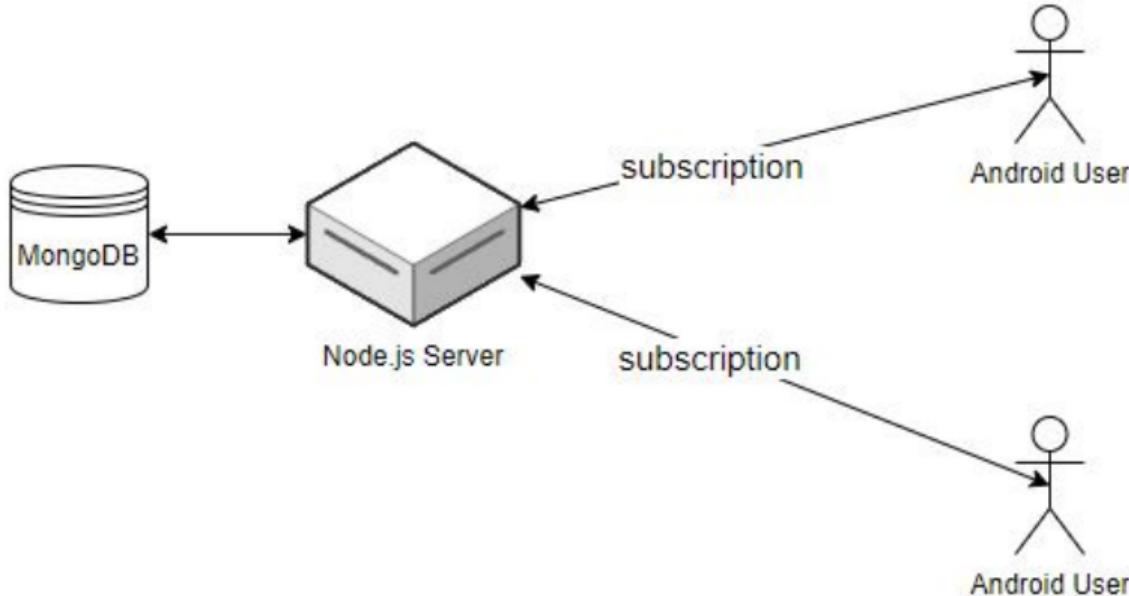

# Main Features

- Creation of own events and joining into events of other users
- A filterable list of upcoming events
- An interactive map that displays event locations

# Adaptation Concepts

- Detection and adaptation to bad or no internet
- Detection and adaptation to a low battery

# Architecture

# Benefits

# Benefits

- Easy social networking for a specific situation
